

## Publishing with the Palaeontological Association

Papers are considered for publication on the understanding of the following:

- All authors have seen and approved the submitted version.
- All authors have made a significant contribution to the work.
- Authors are encouraged to detail the relative contribution of each author at the end of the paper; refer to authors by their initials when doing so.
- The named corresponding author is the sole point of contact with the journal.
- Disagreements arising among authors as to any aspect of the manuscript (including its content and author seniority) or with other individuals who have not been listed as authors are not the responsibility of the journals.
- The same or a similar manuscript has not been submitted or published elsewhere; the overlap of content between related articles should be minimal. Duplications of text and use of previously published illustrations without adequate citation may constitute plagiarism and are unacceptable.
- Authors are responsible for the accuracy of their text.
- Published copyright is assigned to the Palaeontological Association, unless a Creative Commons licence is signed by the author and the required APC paid for Open Access.
- All samples were collected and exported in a responsible manner and in accordance with the relevant permits and local laws.
- All specimens or other materials referred to are curated in appropriate repositories, and other researchers are ensured access to them.
- All new zoological generic or specific names will be registered with [ZooBank](#) before publication.

## How to submit a manuscript

Submissions to both *Palaeontology* and *Papers in Palaeontology* should follow the same guidelines and be made through the same [Scholar One portal](#). Authors submitting for the first time may need to register for an account.

The manuscript should be submitted in **Word** format, following the general structure of articles published in the journals. It is **not** necessary to fully format the document in journal style, but please:

- Use sentence case for the title (not full capitals)
- Double space the manuscript
- Follow the general layout of headings (no more than 3 levels, plus systematic headings if required)
- Use Harvard referencing style (Author date)
- Include all author names in all references (please do not use ditto marks).

## Figures

- High quality figures should be supplied in TIF format (using LZW compression) at a resolution of 600 dpi at the final intended size (166, 110 or 80 mm wide).
- Vector images may be supplied in high resolution PDF or EPS format, or as Illustrator files. (Please ensure that fonts are embedded in EPS files.)

- Include the figure number and an indication of the final intended size in the file name (e.g. Fig1\_166.tif).
- Supply colour images in RGB mode.
- Supply black and white images in grayscale mode.
- Ensure that all text is clearly legible at the final intended size.
- The journal is now published online-only so there is no charge for colour reproduction.
- If you have difficulty uploading figures due to file size, please first check the suggestions in the [Figure Guidelines](#). For more help, contact the Publications Officer ([editor@palass.org](mailto:editor@palass.org)).

## Initial assessment

After submission, an initial assessment of all manuscripts (except invited reviews) is undertaken by the Editorial Board. At this time a manuscript can be rejected for one of three reasons:

- It lacks broad appeal to the readership and is instead, at best, a worthwhile contribution, particularly to specialists, but not exceptional. Papers solely describing new species of common genera will not usually accepted (e.g. with a title such as: A new species of ...). It is imperative that at the time of submission an author demonstrates that a paper will have wide appeal to the readership. This should be stated succinctly in a covering letter at the time of submission and demonstrated in the introduction to the paper.
- It has not been prepared in accordance with the [Instructions to Authors](#).
- There is room for substantial linguistic improvement. We recommend asking a native English-speaking colleague to review your paper first; using a paid editorial service does not guarantee final acceptance your manuscript.

Manuscripts that are deemed suitable will be passed to a Handling Editor who will manage the peer-review process. In the light of the comments of at least two referees and the opinions of the Handling Editor and Editor-in-Chief, a decision on the suitability of the manuscript will be made; the corresponding author will be notified by the Handling Editor.

## Editorial decision

After peer review, the corresponding author will receive a decision from the Handling Editor. The paper may be: accepted outright, accepted subject to various levels of revision (minor, moderate or major), rejected outright, or rejected with option to resubmit.

In the first instance, the manuscript has been accepted in its current form and requires no further modification by the author. It will be checked by the editorial team who may suggest further amendments, but the author will not be asked to make these changes.

If the paper is accepted subject to revision (at any level), the author must modify and resubmit the manuscript, answering any review comments, and providing a clear argument against any requested change they disagree with. The revised manuscript should be submitted within a stated deadline and may be subject to further peer review. Resubmission does not guarantee acceptance if the conditions are not answered.

Requested changes may be of a technical nature and include a critique of the quality of both the writing style and illustrations. It is essential that you respond directly to the technical review as well as the scientific reviews.

A paper is only considered to be accepted after any requested changes are made or defended to the satisfaction of the Editor-in-Chief.

The time between submission and acceptance can be considerably shortened if preparation of the original manuscript, and any revision thereof, conforms to the [Instructions to Authors](#).

If a paper is rejected outright, the Editorial Board will not consider a revised version. However, if an option to resubmit is provided the author may submit a revised version of the manuscript (taking into consideration any review comments supplied in the decision letter). This should be an entirely new submission through ScholarOne, but the original manuscript ID should be noted on the submission form.

## Production

The accepted manuscript will be copy edited and the corresponding author will receive a PDF proof. Errors may be corrected at this stage, but cosmetic adjustments may not be allowed.

Note that the quality of figure reproduction in the proof copy will be lower than that of the published article. However, any concerns regarding colour balance should be queried. The proof and any author corrections will also be checked by the Palaeontological Association's Publications Officer, and any proof issues can be raised with them directly.

When the paper moves into production, the corresponding author will be able to track the progress of the article through [Wiley Author Services](#). They will also be able to access the final Version of Record when their article is published.

*Palaeontology* and *Papers in Palaeontology* are published online before inclusion in an issue, through Wiley Online Library Early View. This is the final Version of Record for the paper; no changes can be made after online publication without formal correction. Any citation of the paper should include the online publication date and the doi (digital object identifier) which can be found on the bottom of the first page, and with the basic article details on Wiley Online Library. The doi will allow the paper to be traced after it is assigned to an issue and moves out of Early View.

## Copyright and Open Access

The Wiley OnlineOpen service is available to authors who wish to make their publication Open Access, or whose funding agency requires grantees to archive the Version of Record of their article.

Authors of OnlineOpen articles are permitted to post the final, published PDF of their article on a website, institutional repository, or other free public server, immediately on publication, in addition to its being published in the Wiley Online Library. This is Gold Open Access and an article processing charge (APC) is payable. A full range of Creative Commons licences is available for both journals. Further information about Open Access is available [online](#).

Authors who do not have funds available for Gold Open Access are permitted to deposit the final accepted (but not copy edited or typeset) version on their institutional repository 12 months after publication of the Version of Record (this is Green Open Access as required by UKRI).

Shortly after acceptance, the corresponding author will receive an email invitation to sign a copyright agreement (assigning copyright to the Palaeontological Association) or to select a Creative Commons licence for Open Access (requiring payment of an APC).

Manuscripts will not be published until this has been returned to the Publisher.

## Offprints

Authors receive a complimentary PDF file of the published paper for personal use; they can also nominate up to ten colleagues to receive the same free link and order printed offprints, both through [Author Wiley Services](#).
